Regulator records, 2023-01-01 to 2026-09-17, to the post-cutoff approval set

347	333	246	173	189
FDA (CDER)	EMA (CHMP)	Health Canada	PMDA	TGA
efficacy supplements, sub-type New Indication	positive opinions, extension of indication	SNDS whose reason names an indication	approvals whose notes say new indication	extension-of-indications registrations

1,288 candidate rows, one per regulator decision (S0); indication text from the regulator's record

FDA approval letter, "provides for" sentence (335 of 347); EMA EPAR procedural-steps scope matched to the opinion date (204 of 333); Health Canada NOC reason, PMDA notes, TGA indication (all rows)

identifiers

Drug to DrugBank, disease to MONDO (NCATS Name Resolver / Node Normalizer, cached; MONDO SSSOM), then reviewed: 42 label pins, every flagged match decided

−161 **no indication text yet**

161 rows whose source names the medicine but not the indication (129 unmatched CHMP cards, 10 FDA supplements without a letter, bare "New indication" NOCs)

−663 **not a new indication for the ingredient**

class review at the active-ingredient level, every decision with a rationale and the prior approval it rests on: line extension 309, expanded population 203, ingredient prior indication 114, formulation or route 26, biosimilar alignment 10, first indication 1

−133 **not an indication event**

wording only 51, unclear 39, out of scope veterinary 19, commitment fulfilment 12, excluded 9, indication removed 3

−49 **no disease target**

49 diagnostic, procedural, cosmetic or contraceptive uses

−0 **identifier pending a live lookup**

0 rows whose Name Resolver call is not in the shipped cache

282 reviewed new-indication rows with both identifiers resolved (S1)

−26 **not mappable to a graph node**

vaccine 9, no DrugBank accession 8, generic disease target 6, diagnostic agent 2, combination product 1

256 KG-mappable rows (S2): single agent with a DrugBank accession, disease a specific MONDO term

−140 **collapse across regulators**

256 rows name 268 (row, disease) events; one (DrugBank id, MONDO id) pair each, earliest decision date kept, every approving regulator listed; 63 pairs approved by two or more regulators

128 **unique drug-disease pairs (S3): 88 drugs, 101 diseases**

approved by (a pair can count under several): FDA 68 EMA 41 Health Canada 41 PMDA 66 TGA 44

first approved by: FDA 57 EMA 25 Health Canada 2 PMDA 37 TGA 7

rows per regulator that survive to a pair: FDA 71 of 347, EMA 43 of 333, Health Canada 41 of 246, PMDA 67 of 173, TGA 44 of 189

Per-graph checks (coverage, no prior edge, distance from prior indications) are applied to these pairs; see 07h_post_cutoff_funnel.

repurposing-dataset 0.6.0+20260918; every count re-derived by tools/make_post_cutoff_flow_figure.py from the shipped tables
